

IN THE SPECIFICATION:

Please amend the paragraph that begins on page 50 at line 21:

Explanation is made on this embodiment by referring to Figs. 35, 36. In Figs. 35, 36, left and right side apertures are separately controlled, ~~letting~~ leaving the shading part 150B as a boundary. Therefore widths of the apertures 151, 152 do not change. In order to control in such the manner, the transparent electrodes for indicating before or after shifting of the shading part 150B may be formed so as to belong to separate adjacent groups when forming the transparent electrodes .
